project data	160 public buildings, 7 Mio. Euro
project duration	11 / 2017 – ongoing

Access to sustainable Energy!

The Government of the Philippines is working on the following energy objectives: 1) meeting its rural electrification targets by means of renewable energy; 2) promoting energy efficiency; 3) expanding its sustainable energy generation to meet the growing needs of its economy; and 4) providing energy access for the poor through affordable, disaster-resilient energy systems.

GIZ International Services implements the program component ASEP Technical Assistance (TA) and Capacity Building for Reform together with the consortium partners ICF International and Reiner Lemoine Institute. The program supports the Philippine Department of Energy (DOE) in its role as the manager of the country's energy program.

EGS-plan supports the project as key expert in building energy efficiency to support the implementation of a building energy database for public buildings, capacity building for facility managers, assessment of energy saving measures and the review of the building energy code.
